Tired of maintaining a guest book?

Peercore iVISIT

Unmanned Automated Visitors Management System

Visitor Management

Visitor management provides the facility to track the usage of a public building or worksite.

By gathering increasing amounts of information, a visitor management system can record the usage of the facilities by specific visitors and provide information relating to a visitor's whereabouts.

Utilised across multiple sites Visitor Management can give you insight across your business like never before.

These systems are frequently used to complement building security systems and access control systems.

Peercore's iVISIT will replace your manual entry visitor book, giving you instant access to fire and safety reports in the event of an emergency.

For a small monthly subscription you can have Peercore's Visitor Management system up and running in your business within 48 hours.

Contact us for further information.

Contractor Management

Contractor management in conjunction with visitor management along with staff, employees, couriers and any other person who visits your buildings or sites around the country should be recorded as they enter your buildings.

Manual visitor management systems require your reception team or gate keeper to decipher sign-in books, often with multiple, inaccurate and illegible entries. Then spend hours building a spreadsheet in order to create the report. Furthermore manual systems allow other visitors to view previous visit entries by other visitors, potentially breaching privacy rules.

Managing the health and safety of your contractors, visitors, staff, employees and more has never been easier.

Knowing where all people visiting your sites across the country are has never been more important.
